Approvals

Lindapter has been trading internationally for many years respecting the market differences around the world. The relevant international authorities have granted many product approvals over time. The catalogue refers to them product by product.

Approvals for construction

The Deutsches Institut für Bautechnik, Berlin is a body which approves products and materials for use in structural engineering applications in the construction and civil engineering industries in Germany.

Lloyds Register Type Approved products have been subjected to tensile, frictional, shear, vibration and shock tests, witnessed and verified by Lloyds Register.

The TÜV is the certifying authority for safety, quality and environmental protection in Germany.

Det Norske Veritas has approved the use of Lindapter products in lifting applications. This includes their use on both mobile and fixed offshore installations.

Approvals for sprinkler products

The American Insurance Association, Factory Mutual, offers an approval which is recognised by the fire protection industry world-wide.

APPROVED

Verband der Schadenversicherer e.V. is a German insurance association who also offers a rigorous approval for products used in the fire protection industry.

These approvals serve to reinforce Lindapter's extensive in-house testing procedures. Lindapter products are tested so that the user can be confident whether specifying or using that Lindapter products will perform as per the information detailed in this catalogue. Loads published are the product safe working loads, taking into account a factor of safety.

Corrosion Protection

Lindapter products are delivered as standard either bright zinc plated or hot dip galvanised. Various other coatings and alternative materials are available upon request for most products including:

- Sheradising
- Mechanical galvanising
- Plastic coating
- Special paint coating
- Delta seal
- Delta tone
- Sheraplex
- Stainless steel
